

EGG TIMER

Overview

The Egg Timer app is a simple and user-friendly tool designed to help users perfectly time the boiling of eggs based on their preferred doneness – whether runny yolk, soft boiled, hard boiled, or over cooked. Featuring a clean interface, countdown visuals, and an audible alarm, the app ensures consistent results every time. It is available both as a web-based PWA and a downloadable desktop version for macOS. The app comprises four pages: an index page, a choice page, a timer page, and an end of timer page.

Pages

Index page	This is the landing screen of the Egg Timer app, featuring a single prominent ‘Start’ button. When clicked, it navigates the user to the egg selection interface.
Choice page	This page allows users to choose their preferred egg doneness from four illustrated options. A home icon is also available to return to the start. Selecting an egg type leads to the timer page.
Timer page	Based on the selected egg type, this page displays a countdown timer with a circular progress visual. Users can start or stop the timer using labelled buttons.
End of timer page	Once the timer completes, this page appears with a ‘Start Again’ button that takes users back to the egg selection screen, allowing them to begin a new timing cycle.

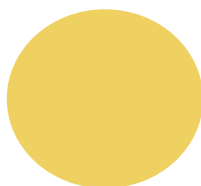

Colour Palette

The app was thoughtfully designed with a warm and inviting colours to create a playful yet comforting visual experience that aligns with the theme of cooking and eggs. The primary colours incorporated:

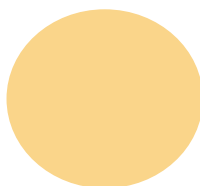

#FDF0A6

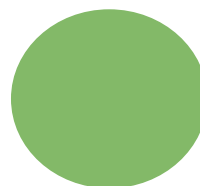

#EFD162

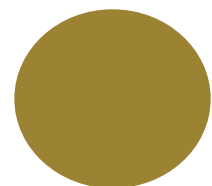

#FAD58A

#83B968

#9C8233
